

HP4ALL hosts the final workshop Heat Pumps skills for NZEB construction

Limerick (Ireland), January 24. **HP4ALL** (Heat Pumps for ALL), a Horizon 2020 research and innovation project that enhances, develops and promotes the **skills** required for high-quality, optimised **Heat Pump (HP) installations** within residential/non-residential buildings is hosting its final event on February 8 from 10:00 to 13:10 CET where it will showcase its HP4ALL package, a series of tools and resources to be used by the different related heat pumps stakeholders.

The venue will be organised in a hybrid format. In this sense, attendees can choose if they prefer to join the project event face-to-face at the Hotel Inglaterra in Seville or online.

During the session, Heat Pumps at the core of the EU Energy Transition, sustainable growth and employment and the Heat Pump market will be addressed, as well as how the HP4ALL package can act as enabler to market development and employment improvement and its regional experience can serve as labour market enhancement. Likewise, the project will analyse the current policies and provide a series of recommendations.
